

# FENTANYL

Fentanyl is a synthetic opioid that is

50 x

stronger  
than heroin

100 x

stronger  
than morphine

Fentanyl can be injected, snorted/sniffed, smoked, taken orally by pill or tablet, and spiked onto blotter paper.

Powdered fentanyl looks like other drugs. Fentanyl-laced drugs are dangerous and people may be unaware that their drugs are laced.

As a liquid, fentanyl is in nasal sprays, eye drops, and dropped onto paper or small candies.

There are two types of fentanyl:

**Pharmaceutical  
&  
Illicitly Manufactured**

## Street Names Include:

- Apache
- Murder 8
- He-Man
- King Ivory
- Great Bear
- Dance Fever
- Jackpot
- China Girl

## How is it abused?

Fentanyl and other synthetic opioids are the most common drugs involved in overdose deaths.

Fentanyl is often added to other drugs because of its extreme potency, which makes drugs cheaper, powerful, addictive, and dangerous.

## You can't

1

see  
it

2

taste  
it

3

smell  
it

## SIGNS OF OVERDOSE:

unresponsive  
slow, weak, or no  
breathing  
limp body  
cold and clammy  
choking or gurgling  
sounds

If someone  
overdoses on  
fentanyl they need  
immediate care.  
You **cannot**  
overdose from  
touching fentanyl.

Over

**150**

people die from  
overdoses from  
synthetic opioids  
such as fentanyl  
everyday.
